## Product Description

The Protein-Protein Conjugation Kit is designed to conjugate 3 separate reactions of protein 7kDa or greater with any other protein of equal or greater size. Any suitably pure monoclonal or polyclonal antibody can be conjugated as well as any other amine containing proteins. This kit is flexible so that researchers with little or no conjugation experience can make their own custom protein-protein conjugates to suit their needs. HPLC purification of the excess protein may be required when the application requires highly pure conjugates.

## Application

This kit is used to conjugate two proteins together which may be used for the most demanding applications including, ELISA, Flow Cytometry, microarray-based immunoassays, Immunofluorescence and Immunohistochemistry based detection assays and experiments. Conjugates can be used for these and other applications where highly quality conjugates are required.\*
