

Goat Anti-Guinea Pig IgG Antibody (H+L), Biotinylated

BA-7000-1.5

Product Images

Short Description

The biotinylated goat anti-guinea pig IgG secondary antibody is used in an avidin-biotin or streptavidin-biotin detection system. These antibodies can be used for tissue and cell staining, ELISAs, and blots.

Features:

- Recognizes both heavy and light chains (H+L)
- Biotinylated to ensure the maximum degree of labeling without compromising the specificity or affinity of the antibody
- Can be used for tissue and cell staining, ELISAs, and blots
- Included in the VECTASTAIN® ABC kits
- Supplied in solution

Additional Information

| Unit Size Applications Immunohistochemistry / Immunocytochemistry, Immunocytochemistry, Immunofluorescence, In situ hybridization, Blotting Applications, Elispot, ELISAs Concentration 1.5 mg active conjugate/ml Recommended Storage 2-8 °C; Store frozen for long term storage Solution 10 mM sodium phosphate, pH 7.8, 0.15 M NaCl, 0.08% sodium azide, 3 mg/ml bovine serum albumin. The recommended concentration range for use is 2-10 µg/ml.lf this biotinylated antibody is to be used in tissues, which may contain cross-reacting endogenous immunoglobulins, dilution of this biotinylated antibody may be made in buffers containing 2% normal serum from the same species as the tissue. Note:This product is the same as that provided in the VECTASTAIN® ABC kits. Target Species Conjugate Biotinylated Host Species Concentrate | | |
