

# Goat Anti-Human IgE, Epsilon Chain Specific, Fluorescein

## FI-3040-.5

[Product Images](#)

## Short Description

---

Fluorescein Goat Anti-Human IgE, epsilon chain specific, can be used for immunofluorescence and other applications. Optimal F/P ratios have been established for each conjugate to ensure maximum fluorescence with minimal background staining.

### Features:

- Affinity-purified, ultrapure, high affinity antibody
- Optimally labeled with fluorescein to provide the brightest label for fluorescence microscopy
- Supplied in solution
- Excitation: 495 nm
- Emission: 515 nm
- Color: Green
- This chain-specific antibody is produced specifically to distinguish between chains or classes of target immunoglobulins. This chain specific antibody has virtually no cross-reactivity with other immunoglobulin classes or other heavy or light chains.

## Additional Information

Unit Size	0.5 mg
Applications	Immunofluorescence, Blotting Applications, Flow Cytometry/Cell Separation
Concentration	1.0 mg active conjugate/ml
Recommended Storage	2-8 °C
Solution	10 mM HEPES, 0.15 M NaCl, pH 7.5, 0.08% sodium azide.
Maximum Emission	510-520 nm
Maximum Excitation	490-500 nm
Recommended Usage	The recommended concentration range for use is 5-20 µg/ml. If this fluorescein-labeled antibody is to be used in tissues which may contain cross-reacting endogenous immunoglobulins, dilution of this antibody may be made in buffers containing 2% normal serum from the same species as the tissue.
Target Species	Human
Conjugate	Fluorescein
Color of Fluorescence	Green
Host Species	Goat
Format	Concentrate
