

ImmEdge Hydrophobic Barrier PAP Pen

H-4000-CatalogNumber

Product Images

Short Description

The ImmEdge pen (H-4000) is an improvement over the PAP pen for tissue specimen preparation. Its hydrophobic barrier feature provides a stable, water-repellent barrier that keeps reagents localized on tissue specimens, preventing reagent mixing when multiple sections are mounted on the same slide.

The barrel of the ImmEdge Pen is composed of acetal plastic which allows for consistent tip retention, easier tip saturation, and improved fluid flow.

ImmEdge Hydrophobic PAP Barrier Pen Features:

- Stable for use with buffers with and without detergent (Tween 20, Triton X-100, etc.)
- Light blue barrier compatible with enzyme or fluorescence-based detection systems
- Soluble in all commonly used clearing agents
- Environmentally friendly – does not contain “ozone-depleting” substances as identified by the Montreal Protocol or the Council of the European Union

Additional Information

Unit Size	2 pens
Applications	Immunohistochemistry / Immunocytochemistry, Immunofluorescence, In situ hybridization
Safety Title	Cancer and Reproductive Harm
