# Rabbit Anti-Rat IgG Antibody (H+L), Mouse Adsorbed, Unconjugated

## AI-4001-.5

[Product Images](#)

---

## Short Description

---

The mouse adsorbed anti-rat IgG (H+L) secondary antibody has been thoroughly adsorbed by a solid phase technique to remove antibodies that cross-react with mouse immunoglobulins. This adsorbed antibody allows primary antibodies made in rat to be used on mouse tissues.

### Features:

- Affinity-purified, ultrapure, high affinity antibody
- Recognizes both heavy and light chains (H+L)
- Designed for use with mouse tissues that may contain endogenous mouse immunoglobulins

## Additional Information

---

Unit Size	0.5 mg
Applications	Immunohistochemistry / Immunocytochemistry, Immunofluorescence, In situ hybridization, Blotting Applications, ELISPOT, ELISAs
Concentration	1 mg/ml
Recommended Storage	2-8 °C; Store frozen for long term storage
Solution	10 mM sodium phosphate, pH 7.8, 0.15 M NaCl, 0.08% sodium azide, 20 mg/ml sucrose
Target Species	Rat
Conjugate	Unconjugated
Host Species	Rabbit
Format	Concentrate
