

AZDYE 532 DBCO

SKU: CCT-1282

DESCRIPTION

AZDye™ 532 DBCO is an azide reactive probe that can be used for imaging azide-tagged biomolecules via a copper-free “click reaction”. DBCO moiety reacts with azides to form a stable triazole and does not require Cu-catalyst or elevated temperatures. In application where the presence of copper is a concern AZDye™ 532 DBCO is an ideal alternative to copper requiring fluorescent alkynes.

AZDye™ 532 DBCO is ideally suited for the frequency-doubled Nd:YAG laser line. This probe is water-soluble and its fluorescence is pH independent over a wide pH range. The brightness and photostability of AF 532 dyes are well suited to direct imaging of low-abundance targets.

AZDye™ 532 is spectrally almost identical to many other fluorescent dyes based on sulfonated

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.

rhodamine core, including Alexa Fluor® 532 and CF®532 Dye.

SPECIFICATIONS

CAS Number	N/A
Molecular Weight	872.92
Appearance	Orange to light red solid
Extinction Coefficient	78,000
Purity	>95% (HPLC)
Unit Size	1 mg, 5 mg, 25 mg
Solubility	Water, DMSO, DMF
Storage Instructions	-20°C. Desiccate
Spectrally Similar Dyes	Alexa Fluor® 532, Atto™ 532, CF® 532 dyes
Laser Line	532 nm
Excitation/Emission Maximum	532/554 nm
Shipping Conditions	Ambient temperature
Shipping Instructions	Ambient temperature

ABS/EM SPECTRA

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.
