## **Description**

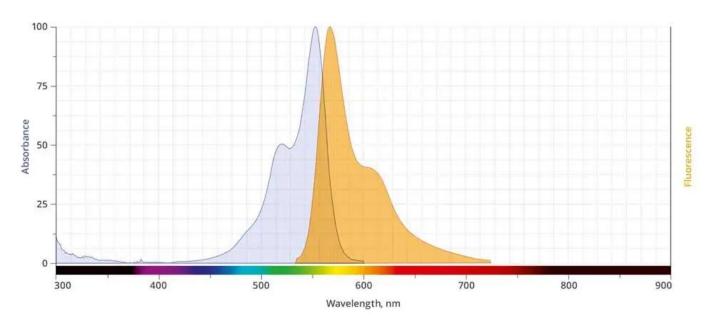

AZDye<sup>™</sup> 555 Azide is a water-soluble, bright orange-fluorescent dye with excitation ideally suited for the 532 nm or 555 nm laser lines and visualized with TRITC (tetramethylrhodamine) filter sets. AZDye<sup>™</sup> 555 conjugates of antibodies, peptides, and proteins are pH insensitive from pH 4 to pH 10. The brightness and photostability of this dye are best suited to direct imaging of low-abundance targets.

AZDye<sup>™</sup> 555 Azide can be reacted with terminal alkynes via a copper-catalyzed click reaction (CuAAC). It also reacts with strained cyclooctyne via a copper-free "click chemistry" reaction to form a stable triazole and does not require Cu-catalyst or elevated temperatures. The brightness and photostability of this dye are best suited to direct imaging of low-abundance targets.

AZDye<sup>™</sup> 555 is structurally similar to Alexa Fluor® 555, and spectrally is almost identical to Cy3 Dye, Alexa Fluor® 555, CF® 555 Dye, or any other Cyanine3 based fluorescent dyes. AZDye<sup>™</sup> 555 Azide can be used a less expensive alternative to Alexa Fluor® 555 Azide.

For research use only. Not intended for animal or human therapeutic or diagnostic use.

## Abs/Em Spectra

## **Specifications**

Unit Size 1 mg, 5 mg, 25 mg

Abs/Em Maxima 555/572 nm

**Extinction Coefficient** 155,000

Flow Cytometry Laser Line 532 nm or 555 nm Microscopy Laser Line 532 nm or 555 nm

Spectrally Similar Dyes Alexa Fluor® 555, CF® 555, DyLight® 549, Cy3 Dye

**Molecular weight** 915.08 (protonated)

CAS N/A

**Solubility** Water, DMSO, DMF

**Purity** >95% (HPLC)

**Appearance** Red solid

**Storage Conditions** -20°C. Desiccate

**Shipping Conditions** Ambient temperature

For research use only. Not intended for animal or human therapeutic or diagnostic use.
