

AZDYE 568 TCO

SKU: CCT-1358

DESCRIPTION

AZDye™ 568 TCO reacts with tetrazines to produce a stable, covalent linkage, also referred to as the inverse-electron demand Diels-Alder cycloaddition reaction. This reaction is extremely fast ($k > 800 \text{ M}^{-1} \text{ s}^{-1}$), selective, biocompatible, and does not require Cu-catalyst or elevated temperatures. Such excellent reaction rate constants are unparalleled by any other bioorthogonal reaction pair described to date.

AZDye™ 568 is a bright, and highly photostable, red-fluorescent probe optimally excited by the 532 nm or 568 nm laser line. This probe is water-soluble and its fluorescence is pH independent over a wide pH range. The brightness and photostability of blue dyes are best suited to direct imaging of low-abundance targets.

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.

SPECIFICATIONS

CAS Number	N/A
Molecular Weight	931.08
Appearance	Dark blue solid
Extinction Coefficient	88,000
Unit Size	1 mg, 5 mg, 25 mg
Solubility	Water, DMSO, DMF, MeOH
Storage Instructions	-20°C. Desiccate
Spectrally Similar Dyes	Alexa Fluor® 568, CF™ 568
Excitation/Emission Maximum	578/602 nm
Shipping Conditions	Dry ice
Shipping Instructions	Dry ice

ABS/EM SPECTRA

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.
