

AZDYE 568 TETRAZINE

SKU: CCT-1363

Description

A bright, red-fluorescent probe used for detection TCO-tagged biopolymers. AZDye 568 Tetrazine demonstrates exceptionally fast cycloaddition kinetics (up to $30\,000\text{ M}^{-1}\text{ s}^{-1}$) with *trans*-cyclooctenes (TCO) as the dienophile, the fastest kinetics ever reported for any bioorthogonal reaction. In applications such as in vivo cancer imaging or pre-targeted cell labeling studies where rapid reaction kinetics is a must AZDye 568 Tetrazine probe would be of great value.

Tetrazines demonstrate exceptionally fast cycloaddition kinetics (up to $30\,000\text{ M}^{-1}\text{ s}^{-1}$) with *trans*-cyclooctenes (TCO) as the dienophile, the fastest kinetics ever reported for any bioorthogonal reaction. In addition, inverse-Electron-Demand Diels-Alder reaction of tetrazines with *trans*-cyclooctene forms a stable covalent bond and does not require Cu-catalyst or elevated

temperatures.

AZDye 568™ is a bright, and highly photostable, orange-fluorescent probe optimally excited by the 568 nm laser line on the Ar-Kr mixed-gas laser. This probe is water-soluble and its fluorescence is pH independent over a wide pH range. The brightness and photostability of this dye are best suited to direct imaging of low-abundance targets.

Abs/Em Spectra

Specifications

Unit Size	1 mg, 5 mg, 25 mg
Abs/Em Maxima	578/602 nm
Extinction Coefficient	88,000
Spectrally Similar Dyes	Alexa Fluor® 568, CF® 488 Dye
Molecular weight	863.92 (protonated)
Solubility	Water, MeOH, DMSO, DMF
Appearance	Red solid
Storage Conditions	-20°C. Desiccate

For research use only. Not intended for animal or human therapeutic or diagnostic use.
