

DBCO-GLY-GLY-GLY

SKU: CCT-1551

DESCRIPTION

Water-soluble, substrate for sortase mediated labeling of proteins. Sortase catalyzes a transpeptidase reaction between a specific internal sequence of a protein and an amine group present on the N-terminus of triglycine recently has become an area of great interest. This method of labeling proteins has been denoted as “Sortagging”.

Proteins conjugated to DBCO-Gly-Gly-Gly can be further modified with azide-containing molecules creating site-specific protein conjugates. Examples of creating protein conjugates using sortagging include site-specifically PEGylating proteins,¹ site-specific protein-lipid conjugates,² and constructing peptides and glycosylphosphatidylinositol chimeras.³ Sortase has also been used in peptide synthesis to cyclize peptides to create macrocyclic peptides, glycopeptides⁴ and protein–protein conjugates.

SPECIFICATIONS

CAS Number	N/A
Molecular Weight	598.63
Appearance	Yellow solid
Chemical Formula	C ₂₇ H ₃₀ N ₆ O ₈ S
Purity	>90% (HPLC)

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.

Unit Size	10 mg, 25 mg, 100 mg
Solubility	Water, DMSO, DMF
Storage Instructions	-20°C. Desiccate
Shipping Conditions	Frozen
Shipping Instructions	Frozen
