DBCO MAGNETIC BEADS

SKU: CCT-1037

DESCRIPTION

DBCO Magnetic Beads are highly uniform polymer-based magnetic spheres of 1 µm diameter that are activated with DBCO groups. A unique surface of DBCO Magnetic Beads means low nonspecific binding in protein-based systems, and superior handling without the use of surfactant. These high-binding beads are suitable for use across a range of research and diagnostic applications, whether you're working at laboratory scale or have the more stringent requirements of high throughput applications.

SPECIFICATIONS

Activation Level	≥ 30 nmol DBCO groups per mg
Appearance	Brown suspension
Bead Size	0.8-1 µm
Coating	Highly crosslinked, proprietary (non-styrene) polymer matrix
Enrichment Target	Azide-modified proteins
Formulation	10 mg/mL suspension in water
Preservative	5 ppm Kathon
Unit Size	1 ml, 5 ml

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.

Storage Instructions	2-8C
Support	Highly uniformed supermagnetic particles
Shipping Conditions	Ambient temperature
Shipping Instructions	Ambient temperature
