# DBCO-PEG4-GLY-GLY-GLY

**SKU:** CCT-1552

## DESCRIPTION

Water-soluble, substrate for sortase mediated labeling of proteins. Sortase catalyzes a transpeptidase reaction between a specific internal sequence of a protein and an amine group present on the N-terminus of triglycine recently has become an area of great interest. This method of labeling proteins has been denoted as “Sortagging”.

Proteins conjugated to DBCO-Gly-Gly-Gly can be further modified with azide-containing molecules creating site-specific protein conjugates. Examples of creating protein conjugates using sortagging include site-specifically PEGylating proteins,[1] site-specific protein-lipid conjugates,[2] and constructing peptides and glycosylphosphatidylinositol chimeras.[3] Sortase has also been used in peptide synthesis to cyclize peptides to create macrocyclic peptides, glycopeptides[4] and protein−protein conjugates.

## SPECIFICATIONS

| | |
|---|---|
| **CAS Number** | N/A |
| **Molecular Weight** | 845.92 |
| **Appearance** | Grey amorphous solid |
| **Chemical Formula** | C38H51N7O13S |
| **Purity** | >95% (HPLC) |
| **Unit Size** | 10 mg, 25 mg, 100 mg |
| **Solubility** | Water, DMSO, DMF |

**For research use only. Not intended for therapeutic or diagnostic use in animals or humans.**

| | |
|---|---|
| **Storage Instructions** | -20°C. Desiccate |
| **Shipping Conditions** | Frozen |
| **Shipping Instructions** | Frozen |
