

DBCO-PEG5-ACID

SKU: CCT-A101P

Description

DBCO-PEG5-Acid is an amine-reactive, non-activated building block with enhanced solubility in aqueous media used for derivatizing amine-containing molecule in the presence of activators (e.g. EDC, or HATU) through a stable amide bond.

DBCO reagents are the most commonly used substrates for strain-promoted click reactions. DBCO compounds react with azide functionalized compounds or biomolecules without the need for a Cu(I) catalyst to result in a stable triazole linkage.

Specifications

Unit Size 25 mg, 100 mg, 500 mg

Molecular weight 596.67

Chemical composition C32N40N2O9

CAS N/A

Solubility DMSO, DMF, DCM, THF, Chloroform

Purity >95% (HPLC)

Appearance Yellow to slightly orange oil

Storage Conditions -20°C. Desiccate

Shipping Conditions Frozen

For research use only. Not intended for animal or human therapeutic or diagnostic use.
