

H.O.H.™ (HUMAN ON HUMAN) IMMUNODETECTION KIT

SKU: HOH-3000

Description

The H.O.H. Immunodetection Kit is intended to detect human (or humanized) antibodies on frozen or paraffin embedded human tissue sections.

Key advantages of the H.O.H. Immunodetection Kit:

- Clear, crisp, specific staining of antigens of interest
- Procedures are simple and easy to follow
- No tedious calculations are required

The H.O.H. Immunodetection Kit contains enough stock reagents to produce about 5 ml of working solution, which is generally sufficient to stain approximately 50 - 100 tissue sections.

Specifications

Unit Size	1 kit
------------------	-------

For research use only. Not intended for animal or human therapeutic or diagnostic use.

Applications	Immunohistochemistry / Immunocytochemistry, Blotting Applications
Technology	Human on Human (H.O.H.) Systems
Detection Enzyme(s)	Peroxidase
Target Species	Human
Format	Concentrate
Blocking Action	Endogenous Human Ig
