

T-BOC-N-EDA

SKU: QBD-10226

DESCRIPTION

t-boc-N-EDA, product number QBD-10226, CAS number 57260-73-8, is the boc-protected form of ethylenediamine. It is not a dPEG® product. However, it can be useful in bioconjugation reactions where an exceptionally short, monoprotected, homobifunctional crosslinker is needed. The free primary amine reacts with activated esters of carboxylic acids (for example, the N-hydroxysuccinimidyl ester, also known as NHS) to form amide bonds. Treatment of the resulting conjugate with acid (for example, TFA) removes the boc protecting group from the protected amine, leaving a primary amine that is free to react.

SPECIFICATIONS

CAS Number	57260-73-8
Molecular Weight	160.21; single compound
Chemical Formula	C ₁₅ H ₃₂ N ₂ O ₅
Purity	> 98%
Unit Size	1000 mg
Solubility	Methylene chloride, DMAC or DMSO.
Spacers	dPEG® Spacer is 4 atoms and 3.8 Å

For research use only. Not intended for therapeutic or diagnostic use in animals or humans.

Storage Instructions

-20°C; Always let come to room temperature before opening; be careful to limit exposure to moisture and restore under an inert atmosphere; stock solutions can be prepared with dry solvent and kept for several days (freeze when not in use). dPEG® pegylation compounds are generally hygroscopic and should be treated as such. This will be less noticeable with liquids, but the solids will become tacky and difficult to manipulate, if care is not taken to minimize air exposure.
